Subject index

Apparatus
- for X-ray imaging 263

Computer simulation
- of dislocation density 6
- of floating zone silicon growth 204
- of heat transfer 389
- of spoke pattern 372
- of surface decomposition mechanism 87
Constitutional supercooling
- of floating zone silicon 204
Convection 192, 204, 359, 372, 501

Dendritic growth
- of alloys 512
- of polymers 538
Device characterization
- diodes 127, 141
- electronic materials 97, 304
- heterojunctions 51, 141
- quantum wires and dots 26, 57
Diamond 225
Diffusonal control
- of lead telluride 273
- of lead telluride selenide 283
Diodes, see Device characterization
Dissolution
- of zinc selenide 113

Electronic materials, see Device characterization
Epitaxy, see Thin film growth
Etching
- chemical 413

Heterojunctions, see Device characterization
Hydrodynamics, see Convection

Kinetics
- of growth 87, 147, 159, 171, 304, 311, 399, 428, 437, 443, 450, 466, 475, 483, 512
- of interface control 51, 119
- of mass transfer 475
- of nucleation 450, 466

Lasers, crystals for
- ytterbium:YAG 348

Melt growth technique
- by Bridgman–Stockbarger method
- - of BSCCO 220
- by Czochralski method
- - of barium borate 352
- - of cadmium tungstate 535
- - of gadolinium vanadate 367
- - of gallium arsenide 21
- - of lanthanum gallium niobium oxide 293
- - of lanthanum gallium silicon oxide 293
- - of lanthanum gallium tantalum oxide 293
- - of lithium gallium oxide 343
- - of silicon 192
- - of YAG 389
- - of ytterbium:YAG 348
- by floating zone method
- - of neodymium silicate 317
- - of titanium vanadate 322
- by slow cooling
- - of lanthanum tungstate 363
- by uniaxial solidification
- - of bismuth antimony 483, 495
- - of indium gallium antimonide 37
- - of zinc telluride 134
- theory of solidification 501
Morphological stability
- of lead zinc titanate 311

Nucleation
- of calcium carbonate 459, 466
- of diamond 225
Numbers
- Marangoni 372, 389
- Rayleigh 372, 501
- Reynolds 389

Phase diagrams
- of zinc selenide 119
Purification of materials
- of tert butylarsine 33

Quantum wires and dots, see Device characterization

Solution growth technique
- by flux method
- - of barium borate 352, 359
- - of calcium palladium oxide 299
- - of lead zinc titanate 311
- - of strontium palladium oxide 299
- by gel method
- - of lead sulphide 147
- by low temperature method
- - of lanthanum tungstate 363
- - of sodium hexafluorosilicate 407
Stefan problem or moving boundary problem
- of Peltier interface demarcation 483, 495
Superlattices, multilayers
- of silicon germanium 171
- of III–V compounds 527
Surface structure
- of potassium bicromate 413

Thin film growth, epitaxy
- by atomic layer epitaxy
- - of strontium sulphide 245
- - of zinc sulphide selenide 152
- by liquid phase epitaxy
- - of gallium indium arsenide antimonide 97
- by metalorganic molecular beam epitaxy
- - of aluminum arsenide 80
- by molecular beam epitaxy
- - of aluminum nitride 15
- - of gallium arsenide 1
- - of gallium nitride 15, 44
- - of germanium 159
- - of indium aluminum arsenide 527
- - of indium arsenide 57, 527
- - of indium gallium phosphide 51
- - of indium phosphide 26, 57, 527
- - of silicon carbide 44
- - of silicon germanium 171
- - of zinc sulphide telluride 141
- by vapor phase epitaxy
- - through chemical vapor deposition
- - - of silicon germanium 171
- - - theory of simultaneous etching and growth 98
- - through metalorganic chemical vapor deposition
- - - of cadmium zinc sulphide 532
- - - of gallium indium arsenide antimonide 97
- - - of gallium nitride 62
- - - of zinc arsenide 235

Vapor growth technique
- by chemical transport
- - of aluminum nitride 69
- by evaporation and condensation
- - of lead telluride 273
- - of zinc selenide telluride 104
- - of zinc sulphide 249
- by physical vapor transport
- - of silicon carbide 256
- by pulsed laser deposition
- - of lithium niobate 335
- - of zinc oxide 326, 330
- by sublimation
- - of silicon carbide 256

Whisker growth
- of silicon 185
